

STORAGE TECHNOLOGY FOR BUILDING MATERIAL AND COMPONENT PARTS

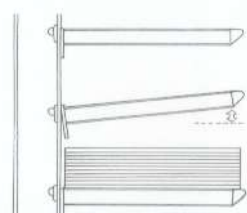

CANTILEVER RACKING

The storage of building elements is a particularly difficult and demanding task. For more than 20 years OHRA characterises the technical development of economical and space-saving racking and storage solutions. OHRA invented and perfected the free movable arm, today a standard product in the building trade. The Cantilever arm moves on impact, saving potential damage to your

rack, forklift and staff. The arm end is rounded as a further safety feature. An adjustment screw is provided to allow adjustment to the horizontal plane of the supported load. Easily adjustable arm heights by the use of an OHRA quick release patented securing device. All support beams are manufactured from high quality hot-rolled steel.

PALLET RACKING

For all your building products there is an OHRA solution in our pallet rack range, for both interior and exterior storage areas. Thanks to a wide range of accessories – suited for building material and component parts- and the robust and durable type of construction by using hot-rolled steel profiles, individual racking solutions such as high storage levels with high payloads can be achieved economically.

External storage areas benefit greatly by the use of covered racking / warehouse buildings. High cube storage is achieved with the existing ground available.

MEZZANINE FLOORS

Mezzanine floors and multilevel storage systems are perfectly solved by OHRA – even for individual space requirements.

individual requirements.

The mezzanine is exactly fitted in your existing warehouse. Particularly high-volume articles are often stored on mezzanine floors. Underneath, e.g. in racks, storage of chemical goods, small parts or goods on pallets. Columns dimensions and payloads can be fitted to your

RACKING SOLUTIONS

By manufacturing our own racking system, OHRA started a story of success which continues today. This is thanks to our customers and their continued requirement for economic storage solutions. The resulting innovations and our competent sales consultants provide OHRA with major competitive advantages over all of our competitors. Modern Robotic manufacturing techniques ensure quality and standardisation for all solutions. With numerous branches and partner companies, OHRA today

is one of the most important European manufacturers of storage equipment - from storage bay marking to racking systems up to the general supplier of warehouses and complex, fully-automated logistic high-racking projects.

RACK-CLAD WAREHOUSE

From the roof-covered racking with back wall to the totally closed warehouse with OHRA-racking supporting basic construction, incl. doors,

gates, earthquake-safety, big spans, lighting systems, integrated sprinkler systems, cranes, foundation works etc.. From the first framework

to the optimum solution considering material flow aspects, up to the building application, the building construction and supervision, for OHRA it is

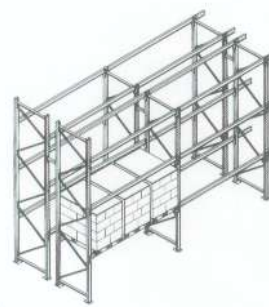

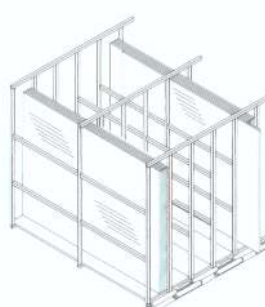

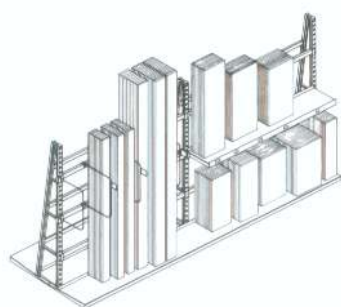

important to find the ideal solution for the customer.

STORAGE TECHNOLOGY

Many other products complete the wide range for the storage of component parts and building material. Besides stake racking and vertical racking for vertical

storage this is of course the pallet-rack, from the standard model (for pallets) up to the heavy model for massive building parts or coils. Mezzanine floors are

becoming more and more important. To store and to commission out of two or more levels means to use the existing warehouse space optimally.
