Country Archives Lund

Project:	Country Archives Lund, Sweden
Sector:	Archive
Product:	Compactus® Double Decker
Storage of:	Files
Year:	2002
Completed by:	Constructor Sverige AB

Country Archives Lund Sweden

The country archives in Sweden let shelf meter space to local archives and state owned companies. They bought an old building with room height > 5 meter. It was their goal to realise a maximum number of shelf meters in the building.

The solution

Constructors proposal of the unique Compactus® Double Decker system provided the best solution, realising maximum storage capacity, functionality and cost effectiveness.

- 2 Double Decker areas are installed:

- Area 1: 16 levels of shelves 320 mm deep = 48 linear meters storage per m² floor surface.
- Area 2: 21 levels of shelves 320 mm deep = 63 linear meters storage per m² floor surface.

- User friendly operation by "One Touch" touch panel operation on both levels.
- Aisle lighting switches on automatically when bases start moving.
- User safety is guaranteed by photo cells and MCMS (Motor Current Monitoring System).
- Steel gratings are applied at the operating side and at the first section for visibility.

Comment from the customer: "This is the best combination of mobiles, shelving and operating system we have ever seen".
